

Email 1:

Is this email Safe or Malicious?	My Analysis
Safe	 It doesn't have any attached link.
	 Sender and receiver treated themselves as if they
	knew each other (calling themselves as "mate" or
	"dude" and seeming to being both into video
	gaming).Doesn't look malicious.

Email 2:

Is this email Safe or Malicious?	My Analysis
Malicious	The email sender is from Russia.(venture.ru)
	 The email sender is requesting the user update its account with fairly generic justification.
	 This is enough indicators for us to assume that the link is probably malicious and should be treated as such.(passing the mouse over the link without clicking, we could know where it wants to redirect us.)
	 Overall, the email is not very professional. It is far too generic and very impersonal.
	 The name the email uses (Venture.ru) isn't consistent with the display name (Onedrive).
	 Finally, the email tries to instill a sense of urgency and dread by mentioning that the person's capability to receive large files could be compromised if it doesn't update the account.

Email 3:

Is this email Safe or Malicious?	My Analysis
Malicious	The sender of the email asks the user to click on a link
	with a fairly generic justification.
	 The link is probably malicious, and we can notice that the
	"b" in Facebook was swapped with a similar character
	from another alphabet.

Email 4:

My Analysis
It seems to be a forwarded advertisement, although care should be taken before pressing the "see more" button, I can't find any indication of a scam or malicious activity

Email 5:

Is this email Safe or Malicious?	My Analysis
Malicious	 The sender of the email requests the user access to his account
	with a rather generic and far-fetched justification.
	 In general, email is not very professional or official. It's too generic,
	using terms that could apply to almost anyone, anywhere. Without
	giving any indication that he is a real FBI agent.

Email 6:

Is this email Safe or Malicious?	My Analysis
Safe	 No files or links were attached to the email.
	 Both sender and receiver have institutional ANZ emails.
	 Both sender and receiver seem to be talking about something they know (work project).

Email 7:

Is this email Safe or Malicious?	My Analysis
Malicious	 The attached link is not secure (HTTPS) nor does it show any sign of being official from "Geico".
	 The email sender is offering a probably fake discount on Geico insurance
	 This is enough indicators for us to assume that the link is probably malicious and should be treated as such.
	 Overall the email is not very professional. It is far too generic using terms that could apply to almost anyone and anywhere.
